The Formulas of the Golden Cabinet with Songs is a nineteenth century commentary by Chen Xiuyuan on the *Jin Gui Yao Lue (Essentials from the Golden Cabinet)*, the famous Han dynasty formulary and companion volume to *the Shang Han Lun (Treatise on Cold Damage)* by Zhang Zhongjing. Translated by Sabine Wilms to the highest academic standards and yet eminently readable and intended for clinical application, the present volume discusses the first 100 formulas contained in the Han source text. To explain the internal logic of the formulas, interaction of medicinals, and precise clinical indications, the author quotes a selection of commentators and physicians throughout the ages while also stating her own understanding. Beginning with a full translation of the Jin Gui source text, each entry appears as its own vignette that includes indications and associated symptoms, formula ingredients (converted into modern measurements), instructions for preparation, and commentary. The present edition is bilingual in Chinese and English. To increase clinical applicability, we have also included brief modern monographs for each formula in the appendix. An extensive 324-page book, this is a must-have for all Jingui lovers out there.

Yang Jizhou gives special attention to the Jing Well points, host/guest protocols, and treating disease using the twelve main channels and the eight extraordinary vessels. There is also an exhaustive look at the use of the Stems and Branches and the Chinese calendar for selection of these points. This Volume of the Great Compendium was geared to advise practitioners (from a Ming Dynasty perspective) on how to use the Stems and Branches in their practice, and also for the scholar who wants to understand the complicated subject of Zi Wu Liu Zhu and Ling Gui Ba Fa.

Wilcox does a masterful job of bringing these complex subjects to the reader. Included in this book are 67 diagrams, tables and illustrations that intimately explain the use of the Stems and Branches and the Chinese calendar.
